

**VOLUNTARY REMEDIATION PROGRAM
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT**

PROJECT SUMMARY

Site Name:	Indy Tire
Applicant's Name:	Bridgestone / Firestone
Site Location:	6362 East 82nd Street Indianapolis Marion County
VRP Site Number:	6980405
Project Manager:	Thoma Mattox
Date Application Received:	4/22/1998
Date Project Completed:	3/5/2001
Project Duration:	2years, 11months
Contaminant Group(s):	VOC's, SCOC's, PCB's, RCRA Metals
Media Cleaned Up:	Surface Soils, Subsurface Soils, and Groundwater
Cleanup Goals Achieved:	Tier II Non-residential
Deed/Land Use Restrictions:	None

Project Description: This site entered the VRP after completing the removal of a 280 gallon waste oil Underground Storage Tank (UST). The site entered to specifically address this removal. Soil confirmatory samples were limited to the tank pit, an area of roughly 10 feet x 10 feet in size. The groundwater monitoring well network was extended farther out from the tank pit. Due to constraints on the site, a push probe water sample was gathered to verify groundwater quality under the facility. In addition, during the initial IDEM confirmatory sampling event, the IDEM's groundwater confirmatory samples returned results that exceeded the cleanup objective for lead. However, the groundwater confirmatory samples gathered by Bridgestone / Firestone were below these cleanup objectives for lead. After a re-sampling event during the next quarter, both IDEM and Bridgestone returned results that were below the Tier II Non-residential cleanup objectives. All soil samples returned results that were also below the Tier II Non-residential cleanup criteria.
